Définition et enjeux

La mécanique du solide et des systèmes étudie le comportement des objets solides soumis à diverses forces et moments. Elle permet de comprendre comment ces objets réagissent, se déforment, ou se déplacent sous l'action de ces forces.

Les enjeux principaux incluent :

- La sécurité et la fiabilité des structures
- La performance et l'efficacité des machines
- La prévention des défaillances mécaniques

- L'optimisation des conceptions pour réduire le poids et le coût

Les grandes catégories de la mécanique

La mécanique se divise généralement en plusieurs branches, dont celles essentielles pour la 2e année C :

- Mécanique statique : étude des corps au repos ou en équilibre
- Mécanique dynamique : étude des corps en mouvement
- Mécanique des matériaux : comportement des matériaux sous charge

- Moment de force (ou couple) : effet d'une force qui tend à faire tourner un corps autour d'un point ou d'un axe

Les lois fondamentales

- Première loi de Newton : un corps au repos ou en mouvement rectiligne uniforme tend à le rester en l'absence de force extérieure
- Deuxième loi de Newton : la somme des forces appliquées à un corps est égale à la masse multipliée par l'accélération ($F = ma$)
- Troisième loi de Newton : pour chaque action, il existe une réaction égale et opposée

Les notions de déformation et de contrainte

- Déformation : changement de forme ou de taille d'un corps sous charge
- Contrainte : mesure de la force interne par unité de surface qui résiste à la déformation

Analyse des structures et des systèmes mécaniques

Étude de l'équilibre statique

Structural Details of the Pra C Fa C Rence Systa Me

Nasals and Nasal Cavity

The nasal cavity filters, warms, and moistens incoming air. It is lined with mucous membranes and tiny hairs called cilia, which trap dust and pathogens.

Pharynx and Larynx

The pharynx serves as a passageway for air from the nasal cavity to the larynx. The larynx, containing the vocal cords, is crucial for phonation and also prevents food from entering the respiratory tract.

Trachea and Bronchi

The trachea, or windpipe, extends downward from the larynx and bifurcates into the bronchi, which lead into each lung. The bronchi further divide into smaller bronchioles.

Alveoli

Alveoli are tiny, balloon-like structures where gas exchange occurs. They are surrounded by a network of capillaries, allowing efficient oxygen and carbon dioxide transfer.
