Defining Patina 300

Patina 300 is a specialized chemical coloration process developed specifically for metals commonly used in jewelry making, such as copper, brass, bronze, and silver alloys. The resulting film reflects light in specific ways, creating a range of hues?from deep blues and greens to fiery reds and purples.

The chemistry involves:

- Oxidation reactions: The chemicals react with metal surfaces to produce metal oxides.
- Color tuning: By adjusting application methods and chemical concentrations, jewelers can achieve specific coloration effects.
