Understanding Infrared Thermography (IRT) in Predictive Maintenance

What Is Infrared Thermography?

Infrared thermography is a non-contact inspection method that captures the thermal radiation emitted by objects and converts it into a visual image called a thermogram. Every object with a temperature above absolute zero emits infrared radiation, which thermal cameras detect and translate into temperature maps. Unlike traditional inspection tools, IRT allows technicians to scan equipment from a distance, making it a safe, efficient, and highly sensitive diagnostic tool.

How Does IRT Contribute to Predictive Maintenance?

Predictive maintenance aims to predict equipment failures before they occur, enabling timely
