Sample Aasspp Nneett Mmvvcc linnteerrvviieeww Qqueessttiioonss and How to Approach Them

Sample Question 1: Implement a Function to Check for Palindromes

Question: Write a function that checks if a given string is a palindrome.

Approach:

- Initialize two pointers at the start and end of the string.
- Move inward, comparing characters at each pointer.
- If characters differ, return false.
- If the loop completes, return true.

Sample Solution:

```
```python
def is_palindrome(s):
 left, right = 0, len(s) - 1

 while left
 if s[left] != s[right]:

 return False

 left += 1

 right -= 1

 return True

```
```

Sample Question 2: Design a URL Shortener

Question: How would you design a URL shortening service like TinyURL?

Approach:

- Discuss system components: database, API, redirect service.
- Explain how to generate unique short URLs (hashing, encoding).
- Address scalability, data persistence, and collision handling.
- Consider user analytics and URL management features.

Common Mistakes to Avoid During Aasspp Nneett Mmvvcc linnnteerrvviieeww

- Jumping to code without understanding the problem fully.
- Ignoring edge cases and input validation.
- Failing to communicate your thought process clearly.
